

ABSTRACT OF THE DISCLOSURE

A pants-type disposable diaper 1 including a diaper main body 2 having a front abdomen portion P, a back portion Q, and leg hole sections S which are formed on both sides of a crotch portion R between these portions, and further having a waist opening which is formed by joining each of both side edges of the front abdomen portion to corresponding each one of both side edges 10 of the back portion, with the crotch portion being provided with an absorbent main body 3, in which waist elastic members 6 are attached in an expanded state in a diaper width direction to parts of the front abdomen portion and to parts of the back portion, both of which 15 parts are corresponding to the waist opening, with each of the leg hole sections being provided with a leg-hole elastic member 8 which is attached in an expanded state along the leg hole, wherein the diaper main body 2 is provided with a display part 20 which displays 20 identification information including a size and a front or back side of the diaper main body, and the like, so as to allow the display part to become recognizable from a side position of each of diaper main bodies, when two or more diaper main bodies are stacked on one another 25 with the front abdomen portion of one diaper main body

being overlapped with the back portion of another diaper main body. This structure makes it possible to easily recognize, even when the diaper main bodies 2 are in a staked state, the identification information.
